

Authenticating to the Wireless Network via Rocket

All Internet traffic via website browsing and applications that use the Internet is filtered. Each iPad user needs to authenticate to the filter before they can use the Internet and then this session will last for 4 hours until re-authentication is required.

You need to authenticate to the web filter by opening the Safari web browser and you will then see the Light Speed Authentication page (See below steps). You need to then enter your School Domain username and password

If an application that uses the internet isn't working (Email, Weather etc) then open Safari and confirm that you are able to load a website.
